

2015 X-Carve Gantry Side Plates and X-Carriage will not work with this upgrade, as they are missing the hole pattern to attach the drag chain brackets. In order to use this upgrade kit, you will need the following items:

[Gantry Side Plates](#)

[X Carriage](#)

Note: the latest version of the X Carriage also lacks the mounting holes for the terminal blocks as the latest version of the X-Carve includes connectorized motors. You'll need to find an alternative way [to wire the stepper motors](#) or attach the terminal blocks.
